

Edoardo Nannotti

Software Developer • etuardu.github.io

Currently focused on Front-end Development, I spent 5+ years in Multicultural Teams and developed strong Communication Skills.

Experience

Software Developer, 2016 - Present

Edukácia@Internet, Partizánske, Slovakia (Hybrid)

- Design and front-end development of TestU, a user-generated content portal for teachers, featuring a flexible exercise editor and an exam feature to collect submissions from pupils (Nuxt.js).
- Lead architecture, design and development of Retevent, a white-label multilingual virtual conference platform (Vue.js, Firestore). The platform hosted 10+ events like the Polyglot Gathering 2023 (569 participants) and the World Esperanto Congress 2021 (1853 participants).
- Build web apps and tools to automate tasks related to on-site events, including e-mail payment reminder, generation of name tags with dynamic layout, validation of meal coupons through QR-code scanning (Bash Script, Python, Google Apps Script).
- Design and development of Trejnumu, an educational multilingual Android quiz app (Apache Cordova).
- Design and development of an animated infographic website for the 20th jubilee of the Manifesto of Prague (jQuery, Snap.svg)

Developer consultant, Graphic Designer, 2013 - 2016

Self-employed

- Work with companies and individuals to help them in feasibility studies, requirement analysis, design and development of additional features for existing projects and creation of new applications (Web Technologies, Google Apps Script).
- Provide documentation and technical support to the users of the systems, maintain the system for the clients.

Software Developer, System Architect, 2012 - 2013

Rodonea s.r.l. / Widepower, Monopoli, Italy

- Creation of a client-server system to collect energy production data from clusters of solar power inverters for statistical and monitoring purpose (Arduino, php, jQuery UI, .NET)
- Build a Modbus RS485 master device providing a REST interface to query slaves. Provide sample web apps to interact with the devices for industrial and home automation (Arduino, jQuery UI).
